(54) Title: METHOD FOR IMPROVING THE PERCEIVED RESOLUTION OF A COLOUR MATRIX DISPLAY

(57) Abstract: This invention relates to a method for improving the perceived resolution of a colour matrix display with at least one pixel, comprising the steps of subdividing an incident colour channel signal (R) to said pixel into a first and second signal component (R<sub>1</sub>, R<sub>2</sub>), applying a gain factor (CR) to one of said signal components (R<sub>1</sub>, R<sub>2</sub>), and subsequently recombining said first and second signal components (R<sub>1</sub>, R<sub>2</sub>) into an exiting, modified colour channel signal (R').
